CLAIMS

WE CLAIM:

1. A method of providing electrical system monitoring and diagnosis,

2 comprising:

providing a motor controller including solid state switches for controlling

- application of power to the motor, and a control circuit for controlling operation of the solid state switches and for measuring electrical power system characteristics relating to operation of the
- 6 solid state switches;

8

10

2

providing an external monitoring and diagnostic device;

establishing communications between the control circuit and the external monitoring and diagnostic device; and

periodically transferring parameters of the measured electrical power system characteristics from the control circuit to the external monitoring and diagnostic device to monitor electrical power system characteristics in real time.

2. The method of providing electrical system monitoring and diagnosis of claim 1 wherein providing a motor controller comprises providing a control circuit including a programmed processor for commanding operation of the solid state switches and a memory

- 4 connected to the programmed processor for storing the parameters of the measured electrical power system characteristics.
- The method of providing electrical system monitoring and diagnosis of
 claim 2 wherein transferring parameters of the measured electrical power system characteristics
 comprises reading the stored parameters of the measured electrical power system characteristics
 from the memory.
- The method of providing electrical system monitoring and diagnosis
 device of claim 1 wherein providing an external monitoring and diagnostic device comprises
 providing a computer having a memory for storing the transferred parameters.
- 5. The method of providing electrical system monitoring and diagnosis of claim 1 wherein providing an external monitoring and diagnostic device comprises providing a personal digital assistant having a memory for storing the transferred parameters.
- 6. The method of providing electrical system monitoring and diagnosis of claim 1 further comprising printing a listing of the transferred parameters of the measured electrical power system characteristics.

- 7. The method of providing electrical system monitoring and diagnosis of claim 1 wherein periodically transferring parameters of the measured electrical power system characteristics comprises transferring the parameters at select time intervals.
- 8. The method of providing electrical system monitoring and diagnosis of claim 1 wherein the control circuit measures line voltage, motor voltage and motor current.
- The method of providing electrical system monitoring and diagnosis of
 claim 1 wherein establishing communications between the control circuit and the external monitoring and diagnostic device comprises providing an infrared communication path between
 the control circuit and the external monitoring and diagnostic device.
- The method of providing electrical system monitoring and diagnosis of
 claim 1 wherein establishing communications between the control circuit and the external monitoring and diagnostic device comprises providing a wired communication path between the
 control circuit and the external monitoring and diagnostic device.

11. A motor controller system for monitoring and diagnosing electrical power system characteristics, comprising:

a motor controller including solid state switches for controlling application of power to a motor, and a control circuit for controlling operation of the solid state switches and for measuring electrical power system characteristics relating to operation of the solid state switches;

4

6

2

4

an external monitoring and diagnostic device including a memory for storing parameters of the measured electrical power system characteristics and an interface for communication with the motor controller; and

means operatively associated with the control circuit and the external monitoring and diagnostic device for transferring parameters of the measured electrical power system characteristics from the control circuit to the external monitoring and diagnostic device to monitor electrical power system characteristics in real time.

12. The motor controller system of claim 11 wherein the control circuit comprises a programmed processor for commanding operation of the solid state switches and a memory connected to the programmed processor for storing the parameters of the measured electrical power system characteristics.

- The motor controller system of claim 12 wherein the transferring means
 comprises means for reading the stored parameters of the measured electrical power system
 characteristics from the memory.
- 14. The motor controller system of claim 11 wherein the external monitoring and diagnostic device comprises a computer having a memory for storing the transferred parameters.
 - 15. The motor controller system of claim 11 wherein the external monitoring and diagnostic device comprises a personal digital assistant having a memory for storing the transferred parameters.

2

2

- The motor controller system of claim 11 further comprising printer
 operatively associated with the external monitoring and diagnostic device for printing a listing of the transferred parameters of the measured electrical power system characteristics.
 - 17. The motor controller system of claim 11 wherein the transferring means transfers the parameters at select time intervals.

- 18. The motor controller system of claim 11 wherein the control circuit
 2 measures line voltage, motor voltage and motor current.
- 19. The motor controller system of claim 11 wherein the transferring means
 2 comprises an infrared communication path between the control circuit and the external monitoring and diagnostic device.
- The motor controller system of claim 11 wherein the transferring means
 comprises a wired communication path between the control circuit and the external monitoring and diagnostic device.

21. A soft starter system for monitoring and diagnosing electrical power system characteristics, comprising:

4

6

8

10

12

14

a motor controller including solid state switches for controlling application of power to a motor, and a control circuit for controlling operation of the solid state switches, the control circuit comprising a programmed processor for commanding operation of the solid state switches and for measuring electrical power system characteristics relating to operation of the solid state switches, and a memory connected to the programmed processor storing parameters of the measured electrical power system characteristics;

an external monitoring and diagnostic device including a memory for storing parameters of the measured electrical power system characteristics and an interface for communication with the motor controller; and

a monitoring and diagnostic program operatively implemented in the external monitoring and diagnostic device for transferring parameters of the measured electrical power system characteristics from the control circuit to the external monitoring and diagnostic device to monitor electrical power system characteristics in real time.

22. The soft starter system of claim 21 wherein the external monitoring and diagnostic device comprises a computer having a memory for storing the transferred parameters.

- 23. The soft starter system of claim 21 wherein the external monitoring and
 2 diagnostic device comprises a personal digital assistant having a memory for storing the
 transferred parameters.
- 24. The soft starter system of claim 21 wherein the monitoring and diagnostic program is operable to upload the parameters from the controller memory to the external monitoring and diagnostic device memory.
- 25. The soft starter system of claim 21 wherein the control circuit measures
 2 line voltage, motor voltage and motor current.
- The soft starter system of claim 21 wherein the interface comprises a wireless interface.
- The soft starter system of claim 26 wherein the interface comprises a wired interface.
